Implementing Forms in PHP

PHP Form Basics

Christian Wenz
Consultant, Software Architect

@chwenz

"A form is a component of a web page that has form controls (...). A user can interact with such a form, providing data that can then be sent to the server for further processing (...)."

HTML Living Standard, https://html.spec.whatwg.org/

"A **form** is a component of a web page that has **form controls** (...). A user can interact with such a form, providing data that can then be sent to the server for further processing (...)."

"A **form** is a component of a web page that has **form controls** (...). A **user** can **interact** with such a form, providing data that can then be sent to the **server** for further **processing** (...)."

```
<form

  action="uri.php"

  method="post">

  <!-- ... -->

</form>
```

HTML Forms

Form target, HTTP verb

HTTP Verbs

GET

GET /uri.php?q=HTTP&lang=en HTTP/1.1
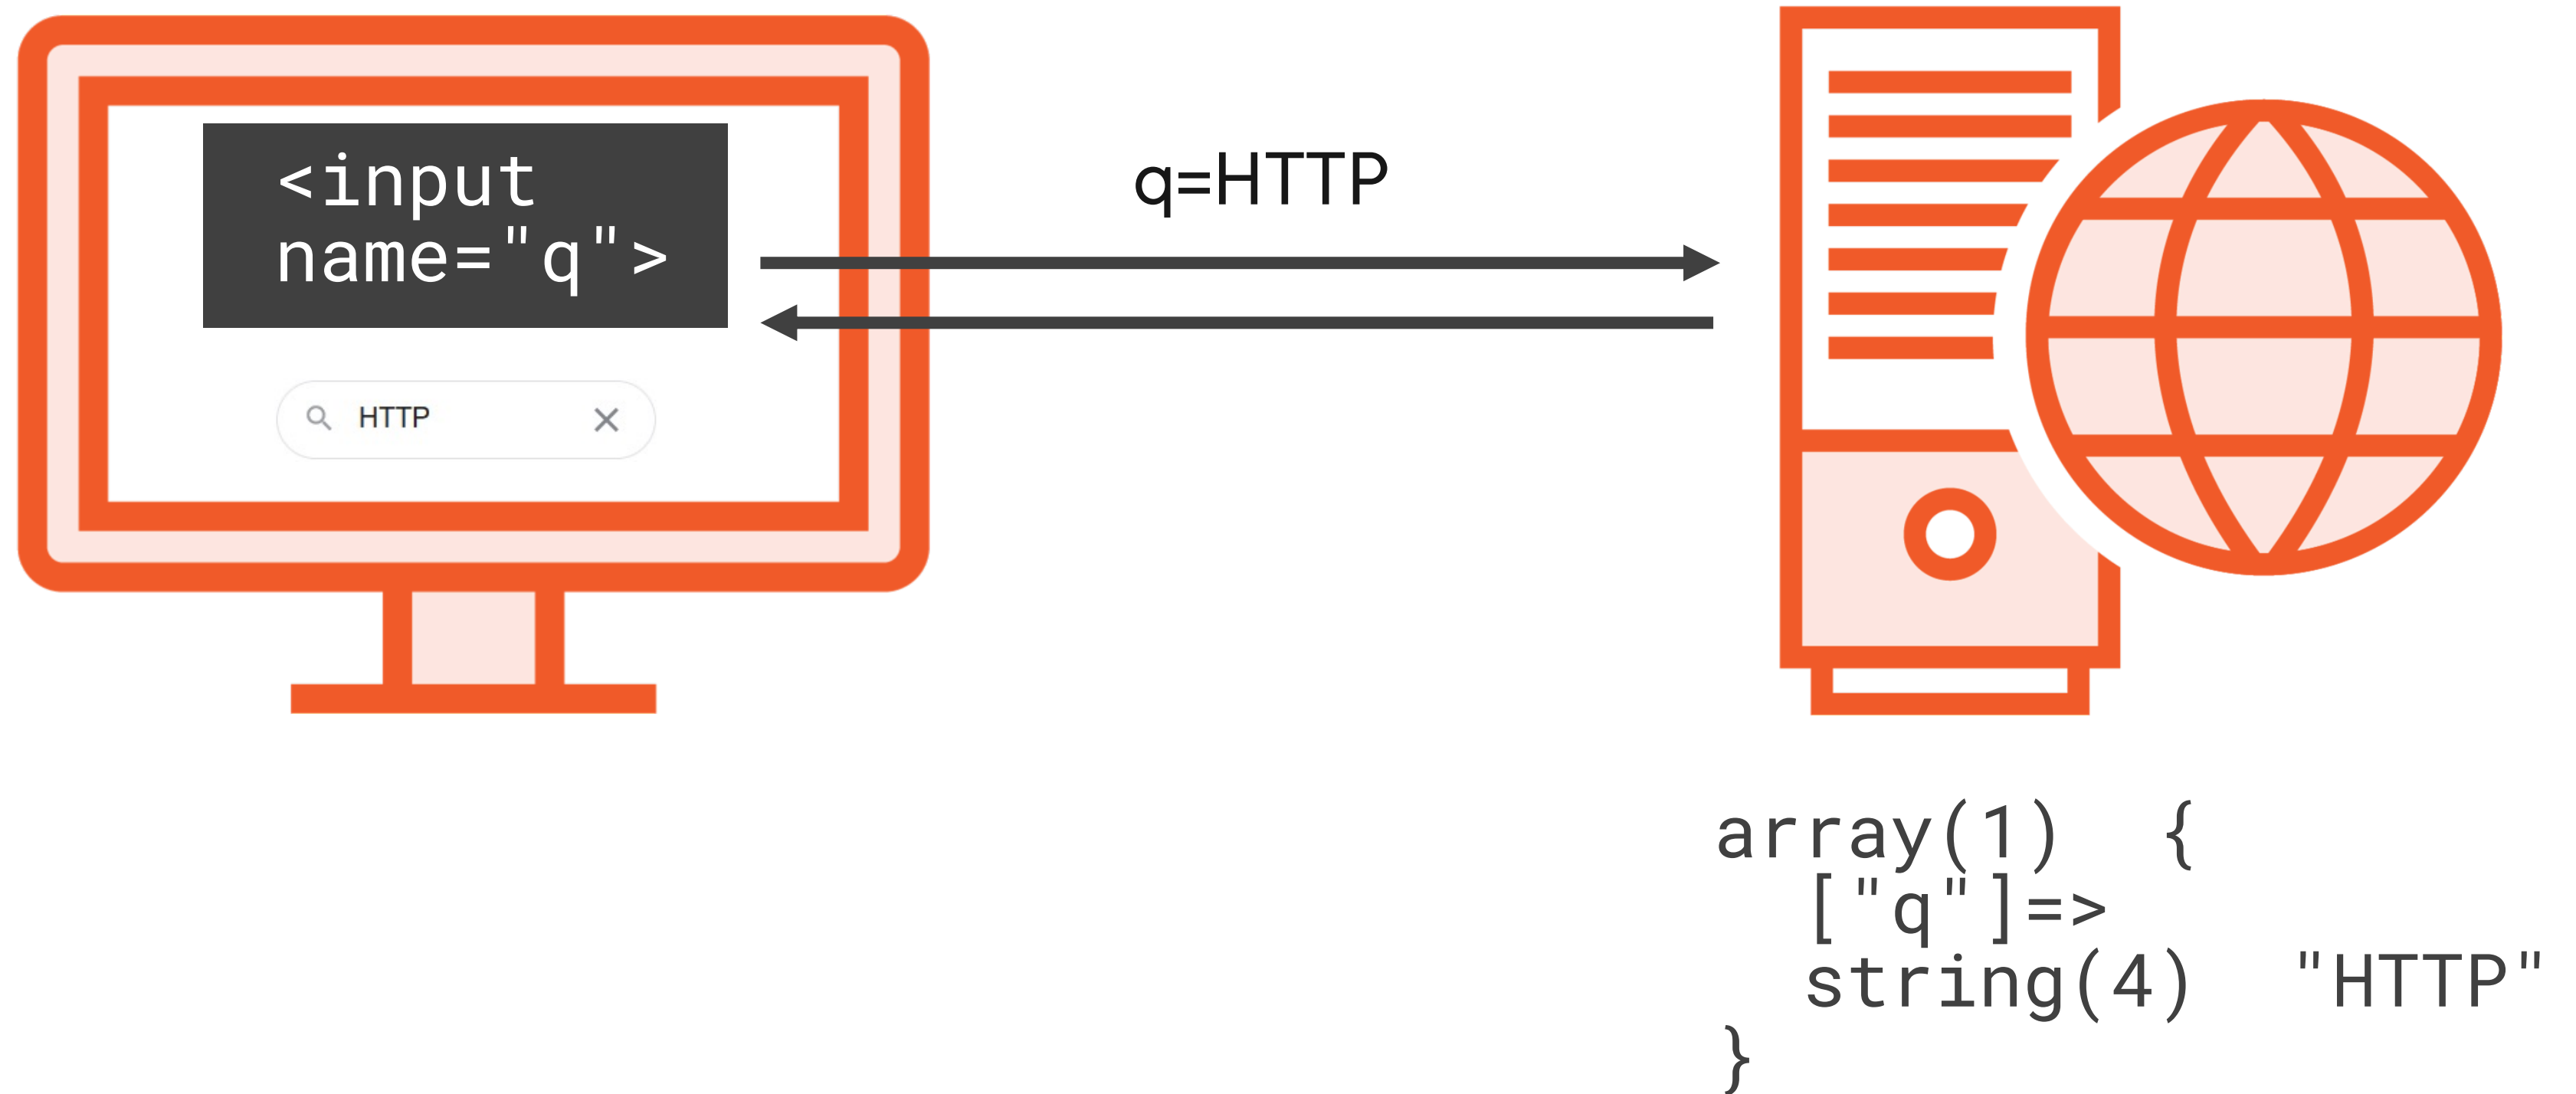

Host: example.com

POST

POST /uri.php HTTP/1.1

Host: example.com

Content-Type: application/x-www-form-urlencoded

Content-Length: 14

q=HTTP&lang=en

HTTP Data in PHP

q=HTTP

```
array(1) {
  ["q"]=>
  string(4) "HTTP"
}
```

Demo

Globoticket registration form
